

Homecare — Permanent Crowns

For your dental health.

How to care for a permanent crown

Now that we've placed your permanent crown, it's important to follow these recommendations to ensure its success:

Chewing and eating

If we used an anesthetic during the procedure, avoid chewing until the numbness has completely worn off.

To protect your crown, avoid chewing ice or other hard objects.

Avoid chewing until numbness wears off

Brushing and flossing

Brush and floss normally, but if your teeth are sensitive to hot, cold, or pressure, you can use a desensitizing toothpaste. If sensitivity persists beyond a few days, call us.

Use desensitizing toothpaste

Rinse with warm salt water

Medication and discomfort

Take antibiotics or other medications only as directed.

To reduce any discomfort or swelling, rinse your mouth three times a day with warm salt water. Use about 1 teaspoon of salt per glass of warm water. It's normal for your gums to be sore for several days.

When to call us

Call our office if your bite feels uneven, you have persistent sensitivity or discomfort, or if you have any questions or concerns.
